

RUNME.DEV

DevOps Notebooks Built with **Markdown**

Codify your operational process as cloud-native, testable, interactive documentation.

Interactive

Transform Markdown into Notebooks and configuration. Reliably run commands and code in VS Code compatible IDE's and the terminal.

Cloud Native

Integrated with your favorite tools and cloud providers to bring important web interfaces directly into your Notebooks.

GitOps & CI

Test your runbooks and docs against your app using the Runme CLI, or our GitHub Action.

```
$ runme run setup  
--opsContainer infra  
--env preview-us1
```

→ Open source, and built on open standards. ←

Save, search and safely share **Runme** Notebook sessions as a team.

Build a DevOps Knowledge Base

Notebook sessions and Markdowns from GitHub become searchable (and launchable). Retrace steps, access artifacts, and learn from your team to keep workflows organized and accessible.

Collaborate and Escalate

Share sessions via Slack, email, or links to your artifacts in our cloud. Keep everyone up to date with notifications and use built-in conversations to stay aligned and solve issues fast.

Notebook Access and Insights

Give Notebooks the resources they need to run critical workflows smoothly. Use activity and analytics to see how Notebooks are used, helping your team invest time where it matters most.

Invite your team, it's free to use.
